Eltete Sanitary Partition Wall System

ELTETE Sanitary Partition Wall Technology

ELTETE OY/AB has been specialising in processing laminated products and manufacturing sanitary cubicles in Loviisa, Finland for over 25 years. ELTETE has firmly established itself on European markets by focusing on continuous development and by operating dynamically.

Robust and durable construction, practical and attractive design - these elements of our sanitary cubicles make us a leading European manufacturer.

Export Markets

With country-specific product programmes, ELTETE has succeeded in opening up many market areas in Europe. We export more than two thirds of our production to the most significant countries in Europe. So, you may come across ELTETE sanitary cubicles wherever you go - be it Helsinki-Vantaa International Airport or a fitness centre in Kassel. We employ more than 130 people in Loviisa - a progressive town situated 90 km east of Helsinki. Our production facilities cover an area of 20,000 m². In 1998 our turnover exceeded EURO 18 million.

The unbeatable benefits of ELTETE sanitary cubicles include:

- Extreme stability due to the solid construction.
- Material made exclusively of damp-resistant V313 chipboard or compact-laminate according to standard.
- 0.8 mm thick HPL laminate layer coating on both sides according to standard. Designs made of compact-laminate panel or melamine resin-coated chipboard are available on request.
- Modular construction method. The modular design of our system means that we can supply in special dimensions as well as the standard ones.
- Easy to install. All jointing elements are included in delivery.
- In use for more than 25 years all over the world.

ELTETE sanitary cubicles for special purposes:

- Compact design with a sliding door
- Special design for nursery schools
- "Barrier-free life" designs for disabled.

ELTETE sanitary partition walls are available in the following standard shades:

White

Light grey

Beige

Pink

Dark green

Type specimens and colour/ornament maps are available on request.

We reserve the right to modify the colour selection.

Hardware for Eltete sanitary partition walls

Standard hardware – chrom

Standard hardware – brass

Standard hardware – white

Plastic handle

Plastic-coated steel handle

ELTETE Type 24 HPL High Pressure Laminate

Sanitary partition walls of type HPL 24 are extremely robust, made of solid construction and suitable for use all over the world.

The solid construction is manufactured from 22 mm thick, damp resistant V313 high quality chipboard, that is coated with a 0.8 mm thick HPL high pressure laminate layer. Different shades may be selected for external and internal walls because all products are made to order. The partition walls are framed with anodised or powder-coated light alloy profiles. Our engineers have designed the jointing profile and the supporting legs in such a way that they can easily be mounted on the walls and floors. Made-to-order products, complete delivery consignments and easy installation are typical examples of the "easy-to-do" principle that is so characteristic of ELTETE. In short, the installation is quick and easy to complete as you receive all jointing elements and accessories in one and the same delivery.

Our ELTETE type HPL 24 is suitable for both damp and dry spaces.

HPL 24

ELTETE Type Compact 13 and Compact 10

The same excellent construction properties that typify our type HPL 24 can also be found in our Compact 13 and Compact 10 partitions. These types are specially developed for use in either damp or wet applications. The constructions are made of 13 or 10 mm thick solid laminate panel, which meets all long-term sanitary requirements. Due to the low weight of the construction, Compact 13 and 10 may also be interesting alternatives when the installation must be rapidly accomplished or when a building project sets specifies strict weight limits. The same range of colours are available for Compact 13 and Compact 10 partitions as for HPL 24.

Compact 13

Other examples of products where ELTETE sanitary partition technology has been employed

- laminate-coated window sills
- laminate-coated kitchen and laboratory worktops
- laminate-coated washing stands
- Galaxite - the washing stand made of artificial marble
